

# NAUFAL ALTAF

## SOFTWARE ENGINEER / DATA SCIENTIST

Tangerang Selatan, Banten | [naufal@altaf.xyz](mailto:naufal@altaf.xyz) | [www.altaf.xyz](http://www.altaf.xyz) | [github.com/nawocci](https://github.com/nawocci)

### SUMMARY

Practical, hands-on engineer with a strong interest in system design and optimization. I work closely with real-world systems, focusing on end-to-end understanding, efficiency, and scalability. I adapt quickly to new technologies and frameworks, staying current with modern tools to build solutions that are both practical and aligned with real-world needs.

### FORMAL EDUCATION

Information System, Bachelor Program

Sep 2022 - Present

Mercu Buana University

- Graduated with a GPA of 3.X.
- Graduated in 3.5 years.

### PROJECTS & EXPERIENCE

Mobile Development Cohort

Aug 2024 - Dec 2025

Bangkit Academy 2025

- Master materials such as Basic Kotlin, Fundamental Android and Intermediate Android and understand software design principles through SOLID Paradigm.
- Gain insight into Artificial Intelligence and Applied Machine Learning to create innovative and advanced Android applications.
- Completed a Capstone Project, gaining real-world experience in managing projects from planning to execution.

Gagasan Futuristik Tertulis (GFT)

Jun 2023 - Nov 2023

Program Kreativitas Mahasiswa (SIMBELMAWA)

- Collaborated with a multidisciplinary team to design a solution focused on safety and user experience in daily commuting and driving.
- Designed a concept for a heads-up display (HUD) integrated into glasses, enhancing driving experience through real-time navigation and contextual information.
- Applied research and design-thinking methods to translate futuristic concepts into practical, user-oriented system designs.

Software Development

2022 - Present

Personal Projects

- Built and maintained application-level software with emphasis on functionality, data flow, and system integration
- Implemented client-side logic and REST-based communication to support CRUD operations and application workflows
- Debugged and refined application behavior to improve reliability and user experience

Personal Projects

- Worked on Android kernel development and customization for specific devices, focusing on performance tuning and hardware compatibility
- Built and maintained device-specific AOSP components, including device and kernel trees
- Used Git-based workflows to manage patches, testing, and long-term maintenance of archived branches

SKILLS
